## DETAILED ACTION

### *Specification*

1. The disclosure is objected to because of the following informalities: on page 1, the patent number of the allowed parent application should be included in paragraph [0001]; and on page 8, lines 6 and 10, "90o" should be "90°."

Appropriate correction is required.

### *Double Patenting*

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-16 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 7, 8, 10, 11 and 13-23 of U.S. Patent No. 6,661,832. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 7, 8, 10, 11 and 13-23 of U.S. Patent No. 6,661,832 encompass/cover the limitations recited in claims 1-16,

respectively, of the pending application. Although claim 1 of the pending application does not explicitly recite specific connections between the recited limitations like claim 7 of U.S. Patent No. 6,661,832 (see "connected to the CDMA receiver" in column 16, line 45 and "connected to the signal extractor" in column 16, line 52), it is inherent/implicit that these connections are present based on the inputs of the respective means. For example, with respect to "connected to the signal extractor" in claim 7 of U.S. Patent No. 6,661,832, although claim 1 does not recite that the means for generating is "connected to the means for extracting an estimate of the desired signal component from the received signal," this connection between the two means is implicit since the means for generating is "in response to . . . the estimate of the desired signal component" which is extracted by the means for extracting in claim 1, lines 8-9.
